

The nasal irradiation vocational objections (brief information):

The red blood cell interconnection causes: stress, pollution, over-fat protein rich food, additives, too many free radicals.

The benefits of eliminating interconnections: Improves microcirculation, improve oxygenation of cells and the production of energy and functioning of all organs !!!

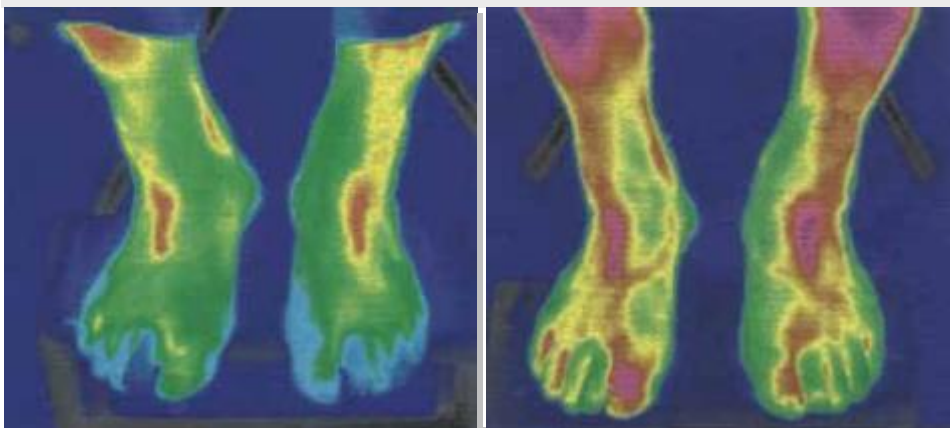

The restoration of healthy red blood cells thus help cure many diseases: eg. stroke, myocardial infarction, hypertension, diabetes, digestive problems, skin diseases

The laser irradiation not only the degreaser enzymes, but also by other proteins also changes the molecular structure of the blood, so a range of biological processes start. After treatment nasal cavities with the laser, the mucosal blood vessels constrict, and then dilate, the sympathetic and parasympathetic nerve stimulation result. This leads to increase in cerebral blood flow which affects the whole body.

BEFORE treatment of brain blood flow is weak, **AFTER** soft-laser use and increased blood flow to the brain.

The laser treated of the nasal mucosa remote areas also apply the laser beneficial effect on the circulatory system.

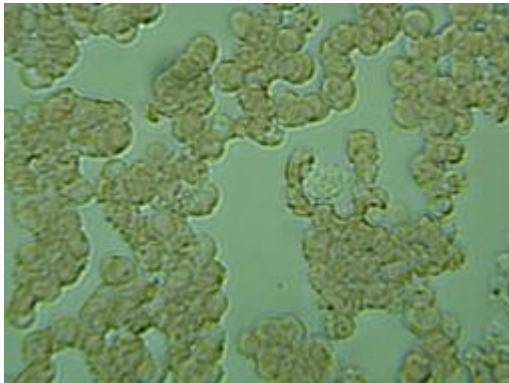

BEFORE Laser Treatment

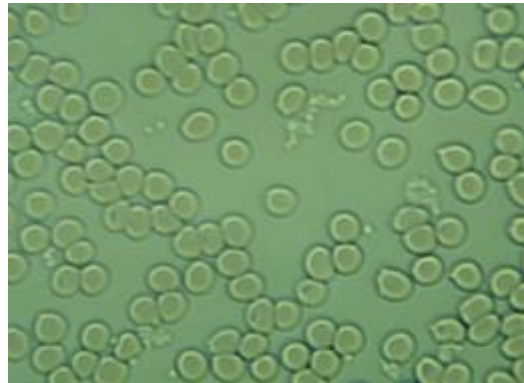

AFTER Laser Treatment

Poor blood supply to the lower limb blood flow markedly improved!

In summary: the nasal cavity laser light irradiation immediately improve the quality of blood, microcirculation, visible improvement in blood supply to the brain can cause the blood oxygen content and increase the oxygen supply to organs and tissues. In addition to improve the state of the patient's psychosis, headache, dizziness, and other limb lameness, microcirculation disorders due to problems in case of symptoms in a short time.
